

Compact Underwater Up to 150 Tonne Capacity Tools

The entire range of Simson Compact Jacks and Power Tools has been designed to be used underwater. The water depth can be up to 8000 metres - well below what humans can go down to. The Simson Compact Range have this unique feature because they have a closed oil circuit design. The Simson Power Tools have been tested and proven in the global market for many years. The Simson tools are designed to have superior quality, reliability, safety and value. Their compact size and heavy duty capacity represents new technology and excellent value for money to complete tasks in an efficient manner with a high capacity to lift / pull / press / push.

Underwater Compact Range Includes jacks, lifting wedge, nut splitter, flange spreaders, hydraulic spreader, low height jacks, extension kit and the disc extractor.
